TABLE OF CONTENTS

Preface ix

Permanent Committee x

Acknowledgements x

Welcoming Address xi

List of Participants xiii

PART I: BASIC STUDIES AND NOVEL METHODS IN MODELING ATMOSPHERIC FLOWS

S. R. HANNA / Uncertainties in Air Quality Model Predictions 3

R. B. STULL / Review of Non-local Mixing in Turbulent Atmospheres: Transilient Turbulence Theory 21

HAN VAN DOP / Buoyant Plume Rise in a Lagrangian Framework 97

K. ODUYEMI / Mixing Efficiency of a Stably Stratified Fluid 107

H. BRANOVER, A. BERSHADSKII, A. EIDELMAN and M. NAGORNY / Possibility of Simulating Geophysical Flow Phenomena by Laboratory Experiments 117

R. LIEMAN AND P. ALPERT / Investigation of the Planetary Boundary Layer Height Variations Over Complex Terrain 129

L. RANTALAINEN / The Importance of Mesoscale Phenomena on the Dispersion of Pollutants in the Vicinity of a Point-source Emission 143

YIZHAK FELIKS / A Numerical Model for Estimation of the Diurnal Fluctuation of the Inversion Height Due to a Sea Breeze 151

G. KALLOS, P. KASSOMENOS and R. A. PIELKE / Synoptic and Mesoscale Weather Conditions During Air Pollution Episodes in Athens, Greece 163

Y. TOKAR, J. GOLDSTEIN, Z. LEVIN AND P. ALPERT / The Use of a Mesogamma Scale Model for Evaluation of Pollution Concentration Over an Industrial Region in Israel (Hadera) 185

PART II: ANALYSIS OF CONCENTRATION FLUCTUATIONS

B. L. SAWFORD / Recent Developments in the Lagrangian Stochastic Theory of Turbulent Dispersion 197

H. KAPLAN AND N. DINAR / A Three-dimensional Model for Calculating the Concentration Distribution in Inhomogeneous Turbulence 217

M. POREH, A. HADAD and J. E. CERMAK / Fluctuations of Line Integrated Concentrations Across Plume Diffusion in Grid Generated Turbulence and in Shear Flow 247

P.C. CHATWIN and PAUL J. SULLIVAN / The Structure and Magnitude of Concentration Fluctuations 269

J.D. WILSON, T.K. FLESCH and G.E. SWATERS / Dispersion in Sheared Gaussian Homogeneous Turbulence 281

A. HADAD, M. STIASSNIE, M. POREH and J.E. CERMAK / Fractal Aspects of Integrated Concentration Fluctuations 291

PETER BANGE / Modelling *NO* Conversion by Using Probability Density Functions 303

PART III: EXPERIMENTAL TECHNIQUES AND METHODS OF DATA ACQUISITION

GARY A. BRIGGS / Final Results of the Condors Convective Diffusion Experiment 315

HANS DAHLQUIST / A One Dimensional Wind Profile Model With Stability and Eddy Viscosity Estimations From Sodar Data 329

P. THOMAS and S. VOGT / Intercomparison of Turbulence Data Measured by Sodar and Sonic Anemometers 353

H.E. JØRGENSEN and T. MIKKELSEN / Lidar Measurements of Plume Statistics 361

B. SHTEINMAN, E. MECHREZ and A. GUTMAN / Spatial Structure of a Jet Flow at a River Mouth 379

S. EGERT, E. EYAL, J. SIVAN and R. REICHMAN / Limitation of Using Multitype Sensors in Combination for Verifying Atmospheric Phenomena 385

J. BARKAN and Y. FELIKS / Observations of the Diurnal Oscillation of the Inversion Over the Israeli Coast 393

B. SHTEINMAN, A. GUTMAN and E. MECHREZ / Laboratory Study of the Turbulent Structure of a Channel Jet Flowing Into an Open Basin 411

P.G. DUYNKERKE and M. VAN WEELE / Actinic Fluxes: The Role of Clouds in Photodissociation 417

PART IV: ROUND TABLE DISCUSSION

S.R. HANNA (ED.) / Round Table Discussion: Interactions and Feedback Between Theory and Experiment 435

Author Index 449

The Use of the "SPACEKAP" Style File for Delivering Manuscripts in LATeX 451
